

AI DATA ANALYST AGENT

Enterprise Platform Executive Presentation & Technical Architecture Blueprint

1. Executive Overview & Problem Statement

In modern data analytics, traditional workflows require hours of manual data cleaning, statistical modeling, chart tuning, and report generation. The **AI Data Analyst Agent** bridges this gap by providing an automated, full-stack intelligence platform that transforms raw datasets into actionable executive insights, clean structures, interactive visualizations, machine learning models, and real-time natural language query engines in seconds.

2. Platform Modules & Capabilities

Module	Description	Key Capabilities
Executive Dashboard	Real-time KPI profiling & metrics summary	Row/Col counts, Missing values, Memory profiling, Hero Banner
Data Cleaning Studio	Automated dataset sanitization	1-Click Auto Clean, Mean/Median Imputation, IQR & Z-score Outliers
Visualization Canvas	19+ Interactive chart engine	Histograms, Scatter, Boxplots, Heatmaps, PNG canvas exporter
Talk to CSV Engine	Natural Language Querying	Plain-English text to DuckDB SQL & Pandas execution
Machine Learning Studio	Automated predictive pipelines	Random Forest, Regressors, Classifiers, Train/Test sliders
Reports & AI Assistant	Executive insights & PDF generator	Server-side PDF compilation, AI insights synthesis

3. Technical Architecture & Security Audit

The platform is hardened using the OWASP 5-Pillar Authentication Security Framework:

- **1. Server-Side Input Validation:** Pydantic schemas enforce regex formatting, max character limits, and HTML tag sanitization.
- **2. Rate Limiting & Account Lockout:** Max 10 requests/min per IP, 15-minute account lockout after 5 failed attempts, and progressive response delays.
- **3. Password Hashing:** Salted PBKDF2 SHA-256 (100,000 iterations) with constant-time comparison (`secrets.compare_digest`) to eliminate timing attacks.
- **4. Generic Error Messages:** Identical responses (*'Incorrect email or password.'*) to eliminate user enumeration side-channels.
- **5. Auth Tokenization:** Tokenized HS256 JWT bearer authorization headers with Axios request interceptors.

4. Real-World Future Advancement Roadmap

To scale the AI Data Analyst Agent into an enterprise SaaS product or commercial solution, the following technical advancements are planned:

- **Phase 1 — Managed AI Agents & LLM RAG:** Integrate Google Gemini / OpenAI API for multi-turn agentic conversations over complex multi-file datasets.
- **Phase 2 — Direct Database Connectors:** Expand beyond static CSV files to live SQL connections (PostgreSQL, Snowflake, Google BigQuery, and Supabase).
- **Phase 3 — PowerPoint (.pptx) Deck Exporter:** Implement 1-click presentation slide deck creation using *python-pptx* for board meetings.
- **Phase 4 — Enterprise Drag-and-Drop Pinboards:** Allow analysts to pin favorite charts, metrics, and insights onto custom drag-and-drop dashboard grids.
- **Phase 5 — Asynchronous Task Queues (Celery + Redis):** Process 10M+ row datasets asynchronously with WebSocket progress updates.

5. Live Deployment Specifications

- **Frontend Live Application:** <https://ai-data-analyst-agent-five.vercel.app>
- **Backend API Server:** <https://ai-data-analyst-agent-xs7p.onrender.com>
- **GitHub Repository:** <https://github.com/rpritarianjan90-crypto/AI-Data-Analyst-Agent>
- **Author:** Pritiranjana Rout (B.Tech CSE | Data Analyst & AI Architect)
